# O NAMA THE COMPANY

## AQUAESTIL

Aquaestil plus je privatno poduzeće osnovano 1998. godine kada su dva hrvatska poduzetnika odlučila formirati tvrtku koja će biti vodeći proizvođač kupaonskog asortimana na temelju implementacije naprednih tehnoloških rješenja u proizvodnju.

Razvoj je započeo proizvodnjom akrilnih kada i tuš kada za domaće tržište, a od tada se puno toga promijenilo. Energičnim tržišnim pristupom, fokusom na krajnje korisnike te uvođenjem najnovijih tehnoloških i tehničkih procesa, Aquaestil plus je postigao snažni rast u svim segmentima u samo nekoliko početnih godina.

Proizvodni asortiman je proširen masažnim kadama, masažnim i parnim tuš kabinama te kupaonskim namještajem. Poseban napredak je postignut proizvodnjom umivaonika od umjetnog mramora koristeći se tehnologijom "Syman" kao i tuš kadama, umivaonicima, pultovima i ostalim elementima izrađenima od inovativnog kompozitnog "solid surface" materijala "ASTONE".

Aquaestil was established in 1998 by two Croatian entrepreneurs who had a clear vision in mind: to become a technically driven, leading manufacturer in bathroom products.

They started with the production of acrylic baths and shower trays destined for the domestic market. Since then, many things have changed. Due to Aquaestil energetic market oriented approach and adoption of the latest technological and technical solutions, a rapid turnover increase was achieved in just a few years.

The production was extended to hydro massage bathtubs, massage and steam shower cabins, bathroom furniture, shower trays, shower cabins and products made of composite materials such as sinks manufactured with synthetic marble Syman technology and modern "solid surface" material "ASTONE". Aquaestil today has four production units in Croatia and more than 270 employees. The company has several production facilities plus an in-house research and development

Aquaestil danas ima više od 270 zaposlenika raspoređenih u četiri proizvodne jedinice smještene u Hrvatskoj. Posebno smo ponosni na vlastiti odjel za istraživanje i razvoj koji je zadužen za dizajn i testiranje proizvoda prije njihovog plasmana na tržište. Zahvaljujući tome, besprijekorna kvaliteta proizvoda je zagarantirana kao i zadovoljstvo kupaca koji u njima mogu uživati dugi niz godina.

Pored iznimnih rezultata na hrvatskom tržištu, kao dokaz kvalitete i kontinuiranog rada svakako je i činjenica što su Aquaestil proizvodi prepoznati i na zahtjevnom tržištu EU na kojem se ostvaruje većina ukupnih prihoda poduzeća.

Organizacija poduzeća vođena je primjenom certificiranog sustava kvalitete koje poduzeće posjeduje sukladno normi ISO 9001:2000, a odnosi se na područje proizvodnje i prodaje kupaonskih kada te održavanje cjelokupnog poslovnog i tehnološkog sustava. Svi Aquaestil proizvodi izrađeni su prema najvišim europskim standardima, a funkcionalnost, dopadljiv dizajn i vrhunska kvaliteta njihove su zajedničke karakteristike.

department where all products are being designed and tested before being introduced to the market. As a result Aquaestil guarantees customer satisfaction by ensuring the use of its products for many years.

Besides outstanding achievements on domestic market, recognition of Aquaestil products on demanding EU market, from which the majority of the companies income is generated, is another proof of quality and continuous development. Company operations are guided by a certified quality management system in accordance with norm ISO 9001:2000, which regulates the manufacturing processes, sales and maintenance of the entire business and technology systems as a whole. All Aquaestil products are made according to the highest european standards. Functionality, neat design and premium quality are common denominators.

**AQUAESTIL**

## ZAŠTO AQUAESTIL? WHY AQUAESTIL?

Aquaestil kade izrađene su od 100% lijevanog sanitarnog akrila koji se već dugi niz godina smatra najpogodnijim materijalom za tu svrhu. Lijevani sanitarni akril odlikuje se postojanošću boje, visokom razinom tvrdoće, kemijskom otpornošću i prije svega, besprijekornim sjajem. Zahvaljujući svojoj molekularnoj strukturi kupaonske kade od sanitarnog akrila izuzetno su glatke i imaju minimalnu mikroskopsku poroznost pa se bakterije i mikroorganizmi ne zadržavaju na površini kade što osigurava maksimalnu razinu higijene u Vašoj kupaonici.

Za razliku od nekih drugih vrsta materijala kao što su npr. akril abs ili poliester, lijevani sanitarni akril je zbog svoje homogene strukture savršeni materijal za izradu kupaonskih kada, a eventualna površinska oštećenja ne predstavljaju problem jer brušenjem ili poliranjem ponovno postizemo prvobitno stanje.

Uvedeni sustav upravljanja kvalitetom prema ISO standardima, postignuti certifikati za cjelokupan proizvodni asortiman te informatizacija upravljačkih funkcija društva osnova su za pružanje kvalitetne usluge kupcima.

Detaljno testiranje i kontrola proizvoda prije lansiranja na tržište naš je način nadziranja kvalitete proizvoda čime svojim kupcima dugoročno jamčimo uživanje u Aquaestil proizvodima.

Kupaonske kade i tuš kade izrađuju se u skladu sa normama HRN EN 14516 i HRN EN 14527 prema internacionalnoj klasifikaciji standarda za akrilne kade (ICS), te prolaze još strožu internu kontrolu. Za sve proizvode dostupni su Vam atesti i certifikati, a na sve akrilne kade i tuš kade pružamo 10 godina garancije te uslugu servisa dostupnu na području cijele Hrvatske.

Aquaestil bathtubs are made of 100% sanitary cast acrylic which is considered to be the most suitable material for that purpose. It is characterized by its color immutability, toughness, chemical resistance and unmatched glossiness. Due to its molecular structure, bathtubs made from this material are very smooth and have minimal porosity ensuring that bacteria and other microorganisms cannot remain on the surface; therefore achieving the maximum level of hygiene in your bathroom.

Unlike some other materials, such as abs acrylic and polyester, sanitary cast acrylic is the ideal material for bathtub production due to its homogenous structure. Minor surface damages can be repaired easily with simple brushing and polishing; completely restoring its original state.

Quality management system according to ISO standards, certification of the entire production line and informatization of all the companies functions are the basis for providing quality service to our customers.

Detailed testing and controlling of our products prior to market launch is our way to monitor quality; allowing our customers to enjoy a long-term guarantee for all Aquaestil products.

Bathtubs are produced according to international classification standard (ICS) HRN EN 14516 and HRN EN 14527 norms and are subject to even stricter internal quality control. Attests and certifications for all Aquaestil products are available upon request. All acrylic bathtubs and shower trays offer 10 years warranty and service available in whole Croatia.

## NEWA

Kutne kade  
Corner bathtubs

Newa je duboka kutna kada razvedenih linija s dnom izvedenim u dvije razine, a namijenjena je za dvije osobe. Oblik kade posebno je prilagođen ugradnji mlaznica za masažu leđa u wellness izvedbi. Newa is a deep corner bathtub characterized by indented lines and a two-level bottom. It is suitable for two people. Its shape particularly favors the installation of backside nozzles, which are available in the wellness version.

## CANAL GRANDE

Kutne kade  
Corner bathtubs

Canal Grande je raskošna kutna kada vrlo atraktivnog izgleda. Kaskade u kutu kade, u kombinaciji s ugrađenom armaturom i slapom, dodatno pridonose njenom atraktivnom izgledu. Ova kada je osobito pogodna za ugradnju masaže, a u svim dimenzijama na nju je moguće montirati i paravan. Canal Grande is a commodious and elegant corner bathtub. Imitation of cascades in the corner; in combination with a proper mixer and a waterfall-shaped inflow, will further contribute to its attractive appearance. It is particularly suitable for wellness options and if desired, a shower screen can be installed in any dimension.

## PARAVANI ZA KADE BATH SCREENS

**Reljefno / Textured**

**NANOS PROTIV KAMENCA**

Svi paravani označeni ovim znakom su tvornički, bez dodatne nadoknade tretirani nanosom protiv kamenca čime se dodatno olakšava svakodnevno čišćenje i održavanje.

Ovaj sofisticirani način zaštite staklenih površina zasniva se na primjeni nanotehnologije koja se sastoji od nanošenja nanočestica s komponentama koje se čvrsto vežu na staklenu površinu i odbijaju druge komponente poput vode, različitih ulja, prljavštine, insekata i kamenca. Budući da se voda (samim time i kamenac), nečistoće i gljivice ne mogu čvrsto primiti na površinu, čišćenje je iznimno jednostavno.

Nanos protiv kamenca također štiti i od nepopravljive staklene korozije, a svoje djelovanje čestice na površini zadržavaju dulje vrijeme bez trošenja.

Radi dugotrajnog učinka premaza, tretiranu površinu nije poželjno čistiti sredstvima za čišćenje već je istu dovoljno samo prebrisati vlažnom (najbolje mikrofibra) krpom kako bi površina ponovo bila kristalno čista.

**ANTI-LIMESCALE COATING**

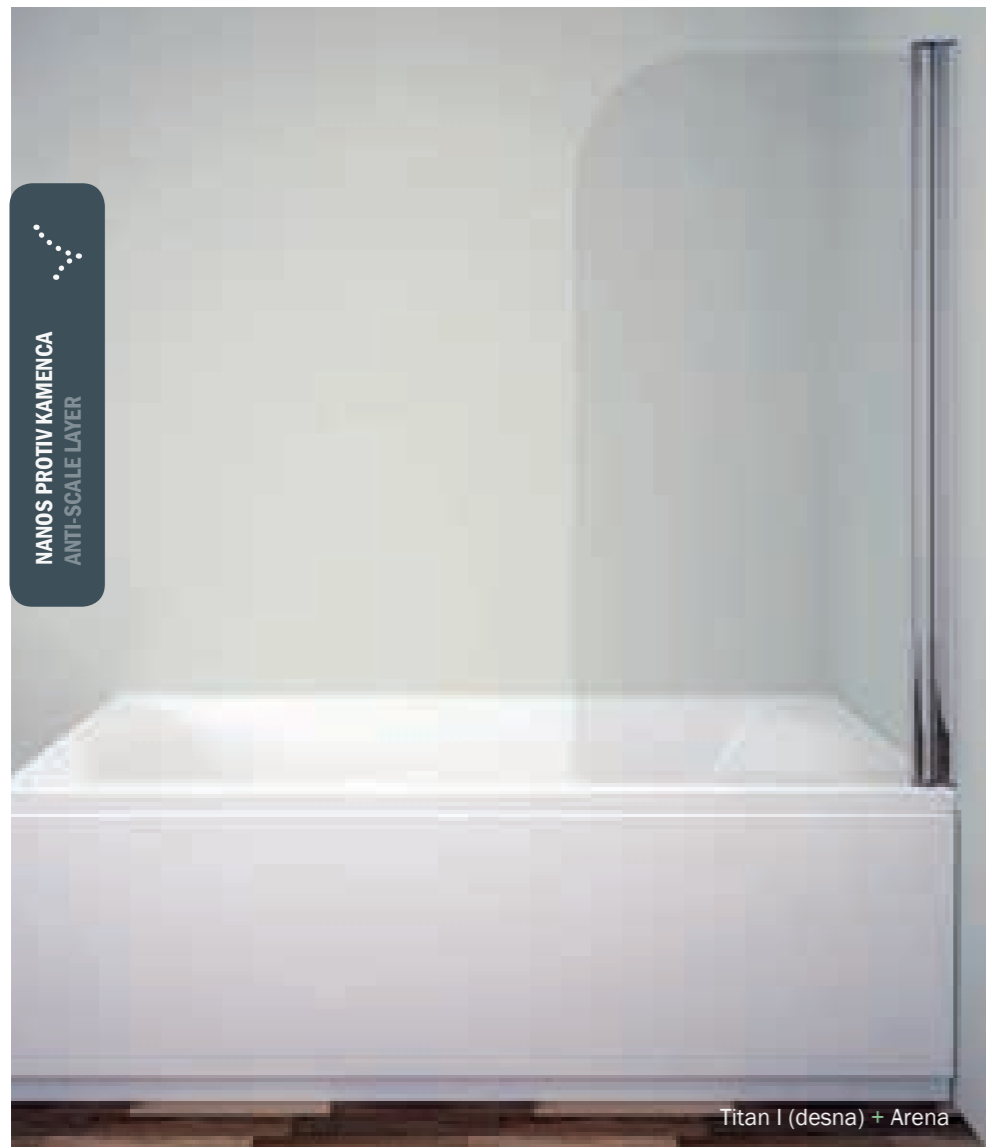

All shower screens marked with this symbol are pre-treated with anti-limescale coating which significantly eases daily cleaning and maintenance.

This sophisticated method of glass surfaces protection is based on the application of nanotechnology. Nanoparticles are firmly attached to the glass surface and repel other components like water, oil, dirt, insects and limescale, making regular cleaning very easy.

Anti-limescale coating also effectively protects from irreversible glass corrosion, while nanoparticles retain their properties for longer period without wearing down.

For long-lasting effect of the anti-limescale coating, it is recommended to use only microfiber cloth and avoid using any kind of common chemical cleansers.

**Prozirno / Transparent**

## TITAN I

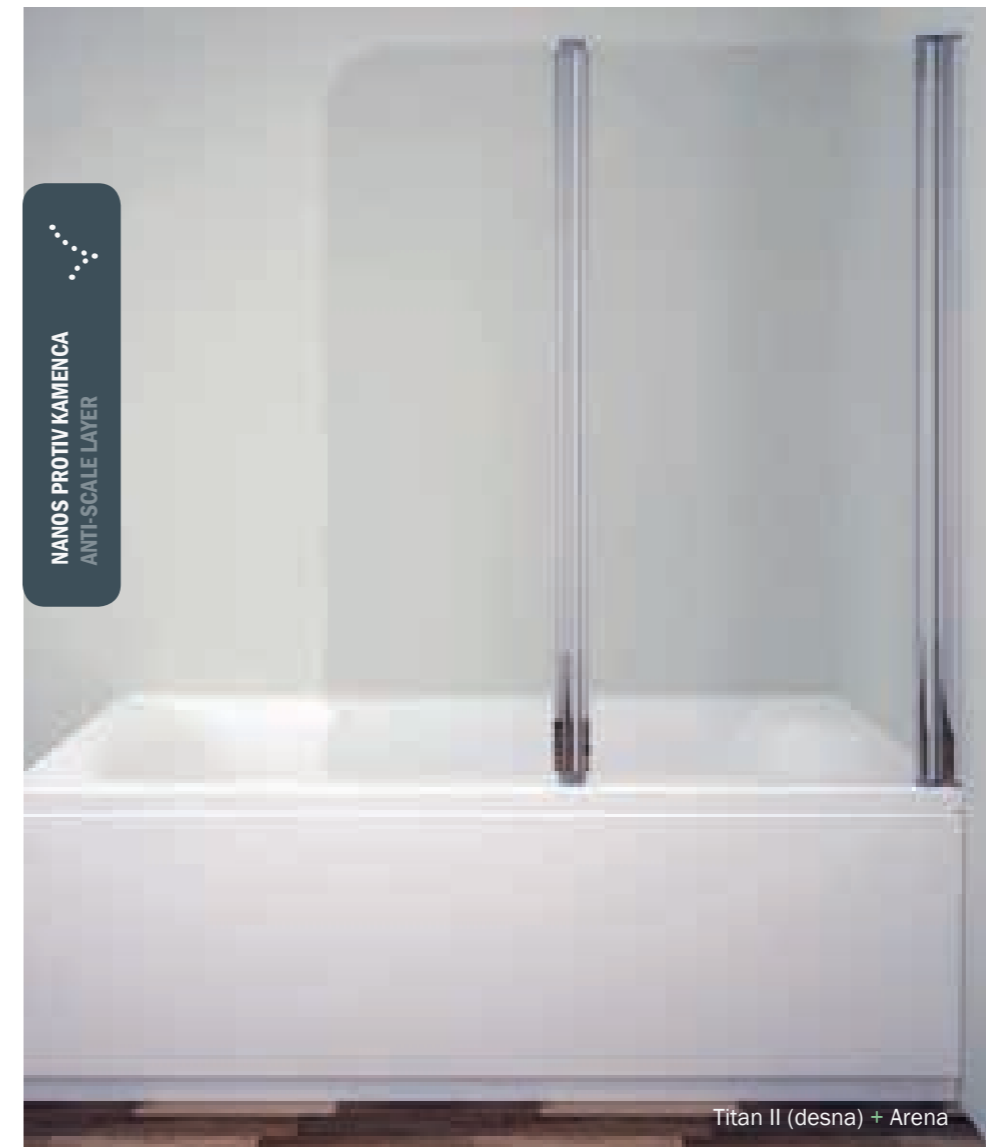

Paravani za kade  
Bath screens

Titan I je univerzalan, jednokrlni paravan za kupaonske kade. Budući da je univerzalan, u izvedbi s prozirnim staklom nije potrebno unaprijed znati na koji će se zid montirati. Pri narudžbi reljefnog stakla potrebno je unaprijed definirati položaj instalacije. Paravan je moguće u potpunosti (i na zidnom i na spojnom profilu) preklopiti u oba smjera. Titan I is a universal, single screen intended for bathtubs. Due to its universality, when ordered with transparent glass, it is not necessary to know in advance onto which wall it will be mounted. However, if textured glass is desired, orientation must be taken into consideration. Screen can be fully turned in both directions.

## PARAVANI ZA TUŠ KADE SHOWER ENCLOSURES

Reljefno / Textured

Prozirno / Transparent

Satinirano / Satinated

### NANOS PROTIV KAMENCA

Svi paravani označeni ovim znakom su tvornički, bez dodatne nadoknade tretirani nanosom protiv kamenca čime se dodatno olakšava svakodnevno čišćenje i održavanje.

Ovaj sofisticirani način zaštite staklenih površina zasniva se na primjeni nanotehnologije koja se sastoji od nanošenja nanočestica s komponentama koje se čvrsto vežu na staklenu površinu i odbijaju druge komponente poput vode, različitih ulja, prljavštine, insekata i kamenca. Budući da se voda (samim time i kamenac), nečistoće i gljivice ne mogu čvrsto primiti na površinu, čišćenje je iznimno jednostavno.

Nanos protiv kamenca također štiti i od nepopravljive staklene korozije, a svoje djelovanje čestice na površini zadržavaju dulje vrijeme bez trošenja.

Radi dugotrajnog učinka premaza, tretiranu površinu nije poželjno čistiti sredstvima za čišćenje već je istu dovoljno samo prebrisati vlažnom (najbolje mikrofibra) krpom kako bi površina ponovo bila kristalno čista.

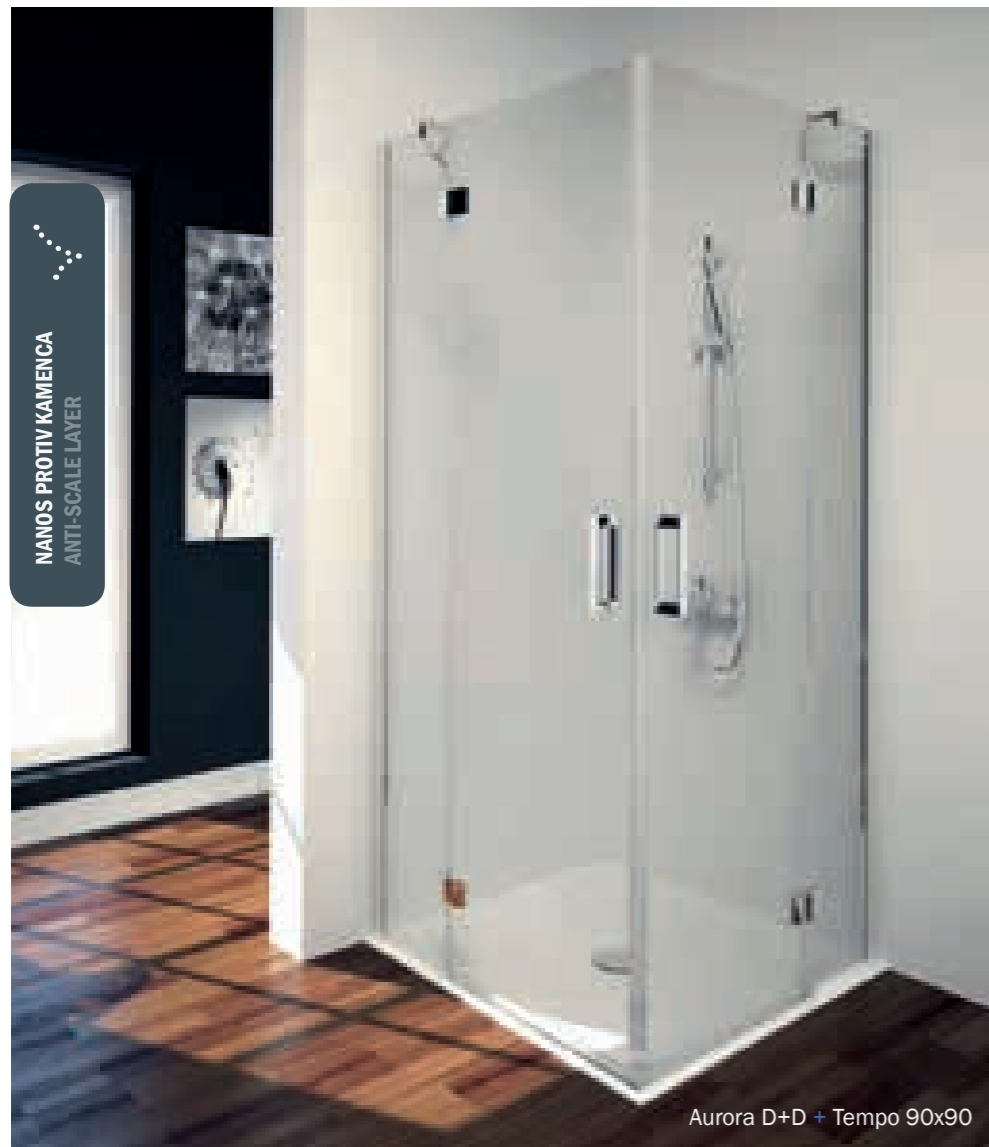

### ANTI-LIMESCALE COATING

All shower screens marked with this symbol are pre-treated with anti-limescale coating which significantly eases daily cleaning and maintenance.

This sophisticated method of glass surfaces protection is based on the application of nanotechnology. Nanoparticles are firmly attached to the glass surface and repel other components like water, oil, dirt, insects and limescale, making regular cleaning very easy.

Anti-limescale coating also effectively protects from irreversible glass corrosion, while nanoparticles retain their properties for longer period without wearing down.

For long-lasting effect of the anti-limescale coating, it is recommended to use only microfiber cloth and avoid using any kind of common chemical cleansers.

**NAPOMENE:**  
NOTES:

Oasis D+D + Slope 90x90

## OASIS D+D

Paravani za tuš kade  
Shower enclosures

Oasis D+D je moderan stakleni paravan s dvoja okretna vrata, a karakterističan je po elegantnim, u presjeku okruglim profilima. Visina od 200 cm čini ga kompatibilnim sa modernim vrlo plitkim tuš kadama. Zbog velike širine ulaza i mogućnosti otvaranja prema van i prema unutra, ova varijanta je izuzetno pogodna za osobe s otežanim kretanjem. Kod naručivanja paravana s reljefnim staklom potrebno je definirati smjer otvaranja vrata (L ili D). S obzirom da ovaj model paravana ima veliku površinu stakla i malo profila, olakšano je njegovo čišćenje. Oasis D+D is a modern shower screen with two rotatable doors characterized by its round profiles. It is compatible with ultra-flat shower trays. Its wide entrance and the possibility of opening doors in both directions, make it particularly suitable for people with mobility problems. When ordered with textured glass, orientation of each screen side must be taken into consideration. Since this model has a large glass surface area and few profiles, it is easier to clean.

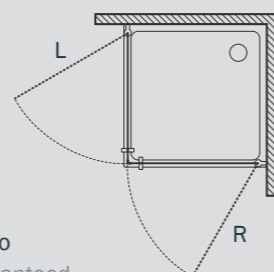

Oasis D (lijeva) + W (desna) + Tempo 90x90

## OASIS D+W

Paravani za tuš kade  
Shower enclosures

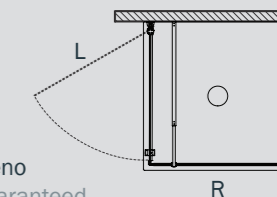

Oasis D+W je moderni stakleni paravan s okretnim vratima i fiksnom stijenom koji se međusobno mogu kombinirati. Paravan je karakterističan po elegantnim, u presjeku okruglim profilima i visinom od 200 cm koja ga čini kompatibilnim sa modernim vrlo plitkim tuš kadama. Kod naručivanja paravana s reljefnim staklom potrebno je definirati smjer otvaranja vrata (L ili D). S obzirom da ovaj model paravana ima veliku površinu stakla i malo profila, olakšano je njegovo čišćenje. Oasis D+W is a modern glass shower screen that consists of a rotatable door "D" and a fixed wall "W". Its characterized by elegant round profiles and a 200 cm height, which makes it compatible with modern ultra-flat shower trays. When ordered with textured glass, orientation of each screen side must be taken into consideration (L or R). Since this model has a large glass surface area and few profiles, it is easier to clean.

## OASIS D

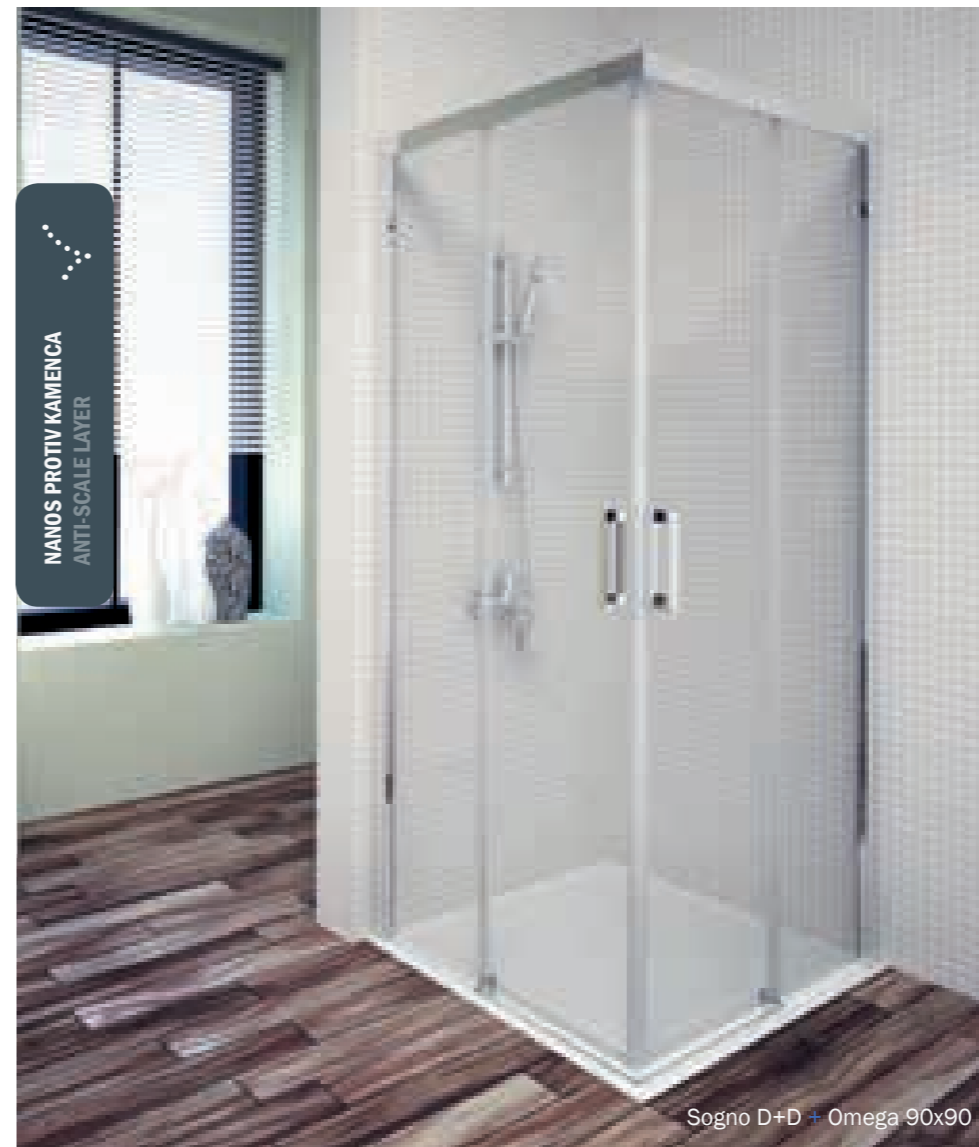

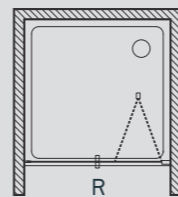

S PREKLOPOM ZA NIŠU  
WITH AN OVERLAP FOR NICHE  
Paravani za tuš kade  
Shower enclosures

Ovaj stakleni paravan za tuš kade koje se nalaze između tri zida opremljen je jednim vratima s preklapom. Zbog načina na koji se otvaraju vrata, štedi prostor kupaoonice. Kod naručivanja paravana s reljefnim staklom potrebno je definirati smjer otvaranja vrata (L ili D). S obzirom da ovaj model paravana ima veliku površinu stakla i malo profila, olakšano je njegovo čišćenje. This glass shower screen is intended for shower trays that are placed between three walls. It consists of a single overlapping door which saves bathroom space. When ordered with textured glass, orientation of each screen side must be taken into consideration (L or R). Since this model has a large glass surface area and few profiles, it is easier to clean.

Oasis D (desna) s preklapom za nišu + Omega 90x75

<b>Dimenzije</b> Dimensions	100, 95, 90, 85, 80, 75, 72, 70 cm po mjeri (samo do max.definirane mjere za pojedini model) by measure (only until maximum defined measure for each particular model)
<b>Visina</b> Height	200 cm 200 cm

Savana D+W + Tempo 100x80

## SAVANA D+W

Paravani za tuš kade  
Shower enclosures

Savana D+W je moderni stakleni paravan za tuš kade s kliznim vratima, a prvenstveno je namijenjen plitkim tuš kadama. Kombiniranjem različitih dimenzija vrata "D" i fiksne stijene "W", stvaraju se idealna rješenja za sve kupaonske konfiguracije. Iako se vrata rade već od dimenzije 100 cm, zbog relativno malog otvora ulaza preporučamo ugradnju na širine od minimalno 120 cm. Za otvore ispod 120 cm preporučamo model Saturno II D+W. Savana D+W is a modern glass shower screen with sliding doors, primarily intended for ultra-flat shower trays. Ideal solutions for every bathroom configuration can be achieved by combining the different dimensions of sliding doors "D" and fixed wall "W". If the door side has 100 cm width, the entrance will be very reduced. Therefore, this screen is recommended for a minimal width of 120 cm (in the door side). If width is smaller than this, model Saturno II D+W is a better solution.

Saturno II D +W

## SATURNO II D+W

Paravani za tuš kade  
Shower enclosures

Saturno II D+W je tuš paravan koji se sastoji od trodjelnih kliznih vrata i jedne fiksne stijene. Zbog širokih profila i velikog opsega podešavanja, paravan je izuzetno pogodan za ugradnju na tuš kade nestandardnih dimenzija. Po potrebi je moguće kombinirati i dvije stijene sa jednim vratima kada je tuš kada postavljena samo na jedan zid. Ručka je integrirana u završni profil s ugrađenom magnetnom brtvom. Ovaj paravan posebno je pogodan za tuš kade manjih dimenzija zbog veće raspoložive širine ulaza. Saturno II D+W is a shower screen that consists of a three-part sliding door and a fixed glass wall. Due to its wide profiles and ability to be adjusted, this shower screen is particularly effective when used with shower trays that do not match standard dimensions. Saturno II D+W offers the possibility to be combined with two fixed glass walls and a door, if the shower tray is adjacent to only one wall. The handles are integrated in the outer profile which also have a magnetic seal. This shower screen is specially suitable for small shower trays thanks to the wider space it can provide in the entrance.

## LAGUNA D+D

Paravani za tuš kade  
Shower enclosures

Laguna D+D je moderni stakleni paravan s dvoja klizna vrata, a dostupan je u nekoliko različitih dimenzija. Kombiniranjem različitih dimenzija stranica s vratima postiže se kompatibilnost s većinom najčešćih dimenzija pravokutnih tuš kada. Laguna D+D is a modern shower screen with two sliding doors and is available in several dimensions. Compatibility with the most common dimensions of the rectangular shower trays can be achieved by combining the different door dimensions.

# DODATNA OPREMA ACCESSORIES

## Ugradbene miješalice Built-in mixers

Na većinu kada moguće je po želji ugraditi i miješalicu. U ponudu smo uvrstili nekoliko modela miješalica kao i opciju za punjenje kade preko preljevno-otočne garniture. Ukoliko umjesto standardnog izljeva za kadu ugrađujete preljevno-otočnu garnituru možete ju po želji kombinirati s miješalicama Cristina i GO.

Most bathtubs can be equipped with a built-in mixer. We offer several models of mixers and an alternative fill-in option through overflow-outflow set that can be combined with Cristina and GO mixers.

**Komplet Cristina (dvoručna)**  
Set Cristina (two-handed)

**Komplet Go (jednoručna)**  
Set Go (one-handed)

**Komplet Surf (jednoručna)**  
Set Surf (one-handed)

**Komplet Tecno (jednoručna)**  
Set Tecno (one-handed)

Preljevno otočna garnitura sa samopunjenjem  
Overflow-outflow set for auto-filling

**Follow me (sifon)**  
Follow me (siphon)

Prilikom odlaganja tuš slušalice nakon tuširanja, neminovno se manja količina vode izlije po crijevu u prostor ispod kade. Sifon Follow Me sakuplja tu vodu, čime se osigurava potpuna suhoća prostora ispod tuš slušalice. Sifon Follow Me ugrađuje se na masažne kade samo po zahtjevu kupca, čime se nadomješta standardni sifon i nadoplaćuje razlika u cijeni. Ovaj sifon je također dostupan i kao zaseban proizvod kojega možete samostalno montirati prema priloženoj uputi.

When disposing shower head after using it, usually a smaller amount of water sprinkles in the space beneath the bathtub following the shower tube. Siphon Follow Me collects that residual water ensuring total dryness. Siphon Follow Me is mounted on massage bathtubs only by request, thus replacing the standard one while difference in price is supplemented. This siphon is also available as a separate product which can be installed according to the appended installation manual.

## Masažni stupovi Massage columns

Masažni stupovi su vrlo praktična nadopuna postojećoj kadi ili tuš kadi jer ne iziskuju izmjene na instalacijama, lako se montiraju te pružaju mogućnost dodatne relaksacije prilikom kupanja ili tuširanja.

Massage columns are a very practical addition to an existing bathtub or shower tray as they do not require alterations to existing installations. They are easy to install and offer additional relaxation during bathing or showering.

# PRIBOR ZA KADE I TUŠ KADE

## ADDITIONAL EQUIPMENT

### OBLOGA ZA KADE BATHTUB PANEL

Kada ne želimo obzidavati kadu, obloga služi za njeno elegantno zatvaranje. Postavljanje obloge preporuča se kod masažnih kada jer je u tom slučaju olakšano održavanje i servis.

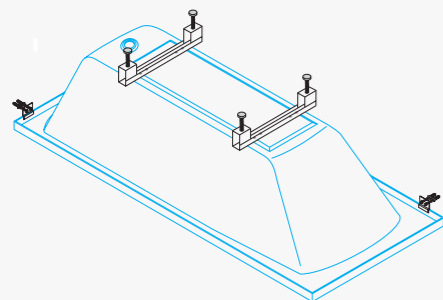

The panel is used to enclose a bathtub when tiling in is not the intention. Installation of a panel is highly recommended on massage bathtubs to allow easier maintenance and service.

### SET ZA MONTAŽU OBLOGE PANEL INSTALLATION KIT

Koristi se kod montaže obloge u kombinaciji s nogicama. Detaljna uputa za montažu priložena je uz svaki komplet.

This kit is used when installing a panel. It is used in combination with the bathtub stands. Detailed installation instructions are included.

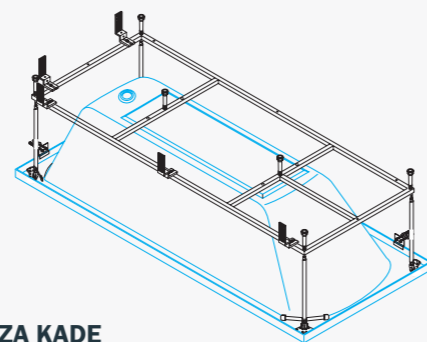

### NOGICE ZA KADU BATHTUB FRAMES

Koriste se za nivelaciju kupaonske kade prilikom obzidavanja ili montaže obloge (u kombinaciji sa setom za montažu obloge). U kompletu se nalaze i montažni zidni profili čijom se primjenom postiže dodatna stabilnost i krajnje pozicioniranje kade.

Ovisno o obliku i veličini kade postoji više vrsta nogica, pa je prilikom narudžbe potrebno odabrati model koji odgovara tipu kade. Detaljna uputa za montažu priložena je uz svaki komplet.

Bathtub frames are used to level and support the bathtub when it is being built-in or when a panel is being installed (in combination with the panel installation kit). Prefabricated wall fittings are also included to ensure the stability of the bathtub and its accurate installation.

Bathtub frames vary depending on the shape and size of the bathtub, therefore it is important to choose the right frame for the bathtub of your choice. Detailed installation instructions are included in every kit.

### PODNOŽJA ZA KADE BATHTUB PEDESTAL

Koristi se u slučaju kada, osim nivelacije kade, trebamo montirati i oblogu. Ugradnjom podnožja postiže se dodatna čvrstoća i stabilnost kade.

Kao i kod nogica, podnožje se odabire ovisno o tipu kade. Detaljna uputa za montažu priložena je uz svaki komplet, a jednostavnost montaže omogućuje postavljanje i bez pomoći stručne osobe.

This pedestal is used when a panel will be installed. Besides helping to level the bathtub, it also provides additional strength and stability to the whole installation.

Like with bathtub frames, this pedestal is used depending on the bathtub model. Detailed installation instructions are included in every kit.

### KUTNE LETVICE ZA KADU/TUŠ KADU CORNER PROFILES FOR BATHTUBS/SHOWER TRAYS

Kutne letvice su završni elementi koji se postavljaju na spoju kade sa zidom nakon montaže kade ili tuš kade s oblogom. Upotrebom kutnih letvica osigurava se nepropusnost na spoju kade sa zidom. Također se pokrivaju različite neravnine i ostali nedostaci kao posljedice ugradnje kade, čime se izbjegava pretjerano silikoniranje kao i zadržavanje nečistoća. Budući da su letvice presvučene akrilom, osigurava se i njihova trajna estetska vrijednost (neće s vremenom požutjeti).

Corner profiles are finishing elements placed in the junction between wall and bathtub. They ensure the tightness of the joint and also cover any imperfections occurred during installation. They also help to avoid using silicone in excess and the accumulation of dirtiness. Since profiles are coated in acrylic, their durability and appearance are guaranteed (they will not turn yellow over time).

### IZLJEV/PRELJEV ZA KADU BATHTUB OUTFLOW/OVERFLOW

### SIFONI ZA TUŠ KADU SHOWER TRAY SIPHONS

Sifon Ø 90 Siphon fi 90

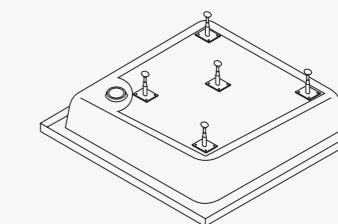

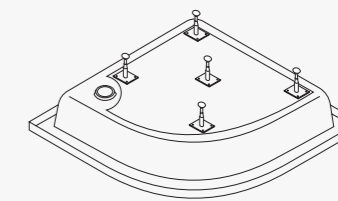

Sifon Ø 52 Siphon fi 52

### REŠETKA ZA UZIDANU MASAŽNU KADU METAL GRID FOR BUILT-IN WHIRLPOOL BATHTUBS

Kako bi se osigurala recirkulacija zraka kod masažne kade koja se uzidava bez obloge, potrebno je ugraditi rešetku. Preporučena minimalna dimenzija je 45x35 cm.

To ensure proper air circulation on massage bathtubs that are built-in without a panel, it is necessary to install this grid. Minimal recommended dimension is 45x35 cm.

### NOGICE ZA TUŠ KADU - PETERODIJELNE SHOWER TRAY FRAMES - 5 PARTS

Koriste se za nivelaciju tuš kade prilikom obzidavanja ili montaže obloge. Ukoliko naručite tuš kadu s oblogom, ista će biti isporučena sa već montiranim nogicama i oblogom.

Shower tray frames are used to level and support shower trays when built-in or installed with a panel. When ordering a shower tray with panel, it will be delivered with its pre-assembled frame and panel.

# ODRŽAVANJE I SERVIS MAINTENANCE & SERVICE

Kupaonske kade Aquaestil izrađuju se od 100 % lijevanog sanitarnog akrila koji se odlikuje izuzetnim karakteristikama u cijeloj svojoj strukturi pa je površinsku glatkoću i sjaj moguće vratiti u prvobitno stanje čak i nakon manjih mehaničkih oštećenja.

Za razliku od kada izrađenih od akrila abs ili poliestera, kod lijevanog sanitarnog akrila nema ograničenja vezanih uz saniranje oštećenog površinskog sloja jer sva svojstva materijala unutar strukture ostaju nepromjenjena. Kade izrađene od sanitarnog akrila odlikuju se optimalnom toplinskom i zvučnom izolacijom, te glatkom i sjajnom površinom ugodnom na dodir koja se izuzetno jednostavno održava.

Za čišćenje koristite krpu ili glatku spužvu i bilo koji tekući deterdžent. Pritom treba izbjegavati abrazivna sredstva koja sadrže zrnca jer bi se njima mogla ogrepsiti površina kade, zbog čega će izgubiti sjaj. Za uklanjanje kamenca preporuča se spužvica namočena u ocat ili sredstva na bazi octa. Nakon čišćenja kadu je potrebno obrisati suhom krpom.

Ukoliko je kada izgubila prvobitan sjaj, ispolirajte ju pastom za poliranje koju ste nanijeli na komadić vate ili krpicu. Redovno održavanje preporuča se provoditi sredstvom za čišćenje i održavanje akrilnih i staklenih površina AQUA CLEAN akril + staklo koje će Vašoj kadi omogućiti postojanost sjaja i potpune čistoće.

Ako je pak došlo do manjih površinskih oštećenja (ogrebotina), moguće ih je sanirati vodobrusnim papirom granulacije 240 do 800 i nakon toga ispolirati pastom. Kod većih oštećenja, koja se ne daju sanirati brušenjem i poliranjem, obratite se našem servisu koji će Vam sugerirati moguće načine sanacije.

Pored redovitog održavanja akrilnih površina potrebno je i redovito održavati masažne sisteme. S obzirom kako se radi o čitavom nizu različitih vrsta mlaznica i cijevi kojima se provodi voda, neadekvatnim i neredovitim održavanjem u sistemu se nakuplja prljavština te stvara idealno tlo za razvoj bakterija i mikroorganizama. Savjetujemo Vam da redovito nakon nekoliko kupanja, odnosno masiranja za čišćenje upotrijebite sredstvo za dezinfekciju.

Kod sustava koji nemaju poseban spremnik za automatsko provođenje dezinfekcije, sredstvo ulijte u vodu te pustite da procirkulira sistemom. Kod masažnih sistema sa ugrađenim spremnikom koji imaju mogućnost automatskog provođenja dezinfekcije, sredstvo ulijte u predviđeni spremnik i uključite sistem za dezinfekciju. U tu svrhu preporučamo Vam originalno Aquaestil sredstvo za dezinfekciju.

Većina modela paravana s prozirnim staklom tvornički je tretirana nanosom protiv kamenca koji uvelike olakšava svakodnevno čišćenje i održavanje. Ova tehnologija sastoji se u nanošenju nanočestica s

Aquaestil products are made of 100% sanitary cast acrylic which has numerous advantages over other sanitary materials such as ABS acrylic and polyester. Its homogenous structure allows surface smoothness and shine to be restored to its original condition even after minor mechanical damage.

Unlike bathtubs made from ABS acryl or polyester, with sanitary cast acrylic there are no restrictions regarding refurbishment of the surface layer because all properties of the material within its structure remain unaltered. Bathtubs made of sanitary cast acrylic are characterized by optimum thermal and acoustic insulation and smooth shiny surfaces which are very easy to maintain.

For daily cleaning, use a fabric or sponge and smooth liquid detergent. Avoid using abrasive mediums that contain particles in order to prevent the surface from damaging and losing its shine. To remove lime scale without damaging the bathtub, use a sponge soaked in vinegar or vinegar based products. After cleaning, wipe with a dry fabric.

If original shine is lost, use a polishing paste and polish it until the initial look is restored. Regular cleaning is recommended to maintain the product in optimum conditions. AQUA CLEAN acrylic + glass guarantees you maximum glossiness and cleanness.

If the bathtub has suffered minor damage such as scratches, they can be repaired with sandpaper of granulation 240-800 and a polishing paste. If damage cannot be repaired, contact our customer service department that will suggest you alternative methods for solving the problem.

Regular maintenance of massage systems is very important. Since they are complex by nature; with many pipes and nozzles to carry the water, inadequate and irregular maintenance can cause accumulation of dirt and create fertile ground for bacteria and microorganisms. We advise you to regularly use some disinfection detergent.

For systems that do not have an automatic disinfection programme, simply pour the cleaning detergent in the water and let it circulate few times. With built-in massage systems in which automatic disinfection can be implemented, just pour in the detergent into the containers and turn on disinfection. For this purpose, we recommend original Aquaestil disinfection detergent.

Most shower screens are pre-treated with a special anti-scale layer. This technology consists of the application of nano particles onto the glass surface in order to repel other particles that tend to stick; such as oil, dirt, insects and lime scale. It also protects against irreparable glass corrosion. After treatment, glass is much more

komponentama koje se čvrsto vežu na staklenu površinu i odbijaju druge komponente poput vode, različitih ulja, prljavštine, insekata i ostataka kamenca. Također štite od nepopravljive staklene korozije. Nakon tretmana, staklo je postojano na trenje, a svoje djelovanje čestice na površini zadržavaju dulje vrijeme bez potrebe za ponovnim tretmanom.

Profili paravana su izrađeni od aluminija, eloksirani u srebrnu boju ili presvučeni zapečenom bijelom bojom u prahu. Eloksiranje ili anodna oksidacija je proces površinske zaštite specifičan za metal aluminij. Ovim procesom aluminij dobiva karakterističnu metaliziranu boju i trajnu zaštitu od korozije što je izuzetno važno u vlažnim uvjetima kao što je kupaonica.

S obzirom na visoku kvalitetu samog materijala, smanjena je potreba za održavanjem te se ono svodi na redovitu upotrebu klasičnih kemijski neabrazivnih sredstava za čišćenje metalnih dijelova u kupaonici.

Pored savjeta za samostalno održavanje naših proizvoda unutar poduzeća djeluje i servisni odjel koji na terenu pruža podršku našim kupcima. Za sva pitanja i savjete slobodno nam se obratite, a kod složenijih zahvata i potrebe montaže ili popravaka, Vaše probleme riješiti će servisna služba. Vaše zadovoljstvo je naš prioritet.

resistant to friction and it is preserved for a longer period of time.

Profiles of the shower screens are made of aluminum, anodized in silver color or coated in white color. Anodizing is a specific process to protect aluminum. It ensures its shiny silver color and protects it against corrosion, which is extremely important in moisturous spaces such as bathrooms.

Due to the quality materials and processes implemented in the shower screen production, maintenance is reduced to use of a regular conventional nonabrasive chemical for cleaning the metal parts.

Besides these advices for self-maintenance of our products, company has a service department that provides field support to our customers. For any more questions or advice please contact us. Your satisfaction is our priority.

## AQUACLEAN SREDSTVO ZA ČIŠĆENJE AQUACLEAN CLEANSER

AQUACLEAN Quando akril + staklo namijenjen je čišćenju i održavanju akrilnih kupaonskih kada, tuš kada, masažnih i parnih tuš kabina, staklenih paravana i druge akrilne i staklene opreme.

AQUACLEAN Quando Sredstvo za aktivnu zaštitu i održavanje kupaonskog namještaja vrlo je učinkovito i na ostalim drvenim površinama koja se žele zaštititi i na kojima se želi povratiti prvotni sjaj.

AQUACLEAN Quando acrylic + glass is intended for cleaning and maintaining acrylic bathtubs, shower trays, massage and steam shower systems, glass shower screens and other acrylic and glass equipment.

AQUACLEAN Quando. Agent for active protection and maintenance of bathroom furniture. It is also very effective on any other wooden surfaces as it protects and restores the original look.

## NANOS PROTIV KAMENCA - SET ANTI-LIMESCALE SET

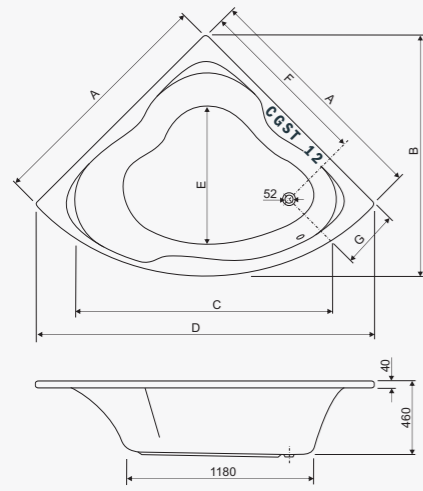

Većina Aquaestil paravana tvornički je tretirana nanosom protiv kamenca, ali kao dodatnu mogućnost nudimo Vam zasebni set AQUACLEAN - zaštitni nano premaz za staklo i keramiku. Pomoću ovog seta možete ponoviti tretman na staklenim paravanima ili od nečistoće i kamenca zaštititi ostale staklene i keramičke površine u Vašem domu.

Set se sastoji od:  
- Nano čistača (200 ml)  
- Nano zaštitnog premaza (2 x 28 ml)  
- Mikrofibra krpe

Most Aquaestil shower screens are treated against limescale. However, we also offer the AQUACLEAN set as a separate item; which provides a protective nano coating to glass and ceramics. With this set, you may reapply the anti-scale layer when necessary and also protect other glass or ceramic surfaces in your home.

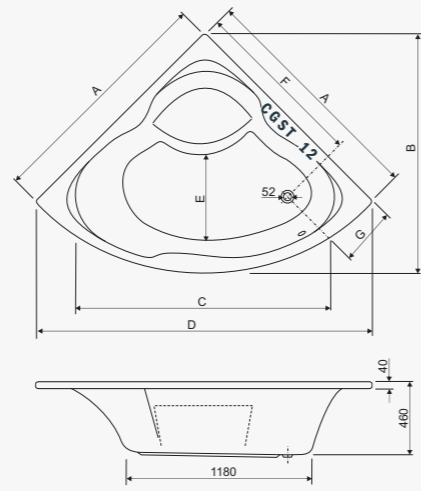

Set consists of:  
- Nano cleanser (200 ml)  
- Nano protective coating (2 x 28 ml)  
- Microfiber cloth
